Jorge Alberto Juárez Bravo

Software Developer · Android & Full Stack

Zapopan, Jalisco · +52 33 1347 6237
jorgejb234@gmail.com · github.com/jorgejbz

Professional Summary

Software developer (Associate Degree in Software Engineering, UTJ) with real-world projects in **native Android**, **full stack web** and multiplayer games. Built and open-sourced two Android launchers: **Aura**, for TV boxes, with tools that detect and remove factory-installed malware (tested on real devices), and **GTS Launcher**, for car head units. Contributed to **Nutrilife**, a digital nutrition platform built with Laravel, MySQL and an Android app. I troubleshoot in depth (ADB, Logcat, networking), document my work and test every change. Seeking a Junior Developer role (Android, web or full stack).

Technical Stack

ANDROID
Java · Android SDK · Gradle · ADB / Logcat · Android Studio · APK signing & releases

WEB / BACKEND
PHP · Laravel · Blade · Alpine.js · JavaScript · React · Angular · Node.js · HTML5 · CSS3

DATA
MySQL / MariaDB · MongoDB · SQL

SCRIPTING & OTHER
Python · PowerShell · Bash · Luau (Roblox) · Arduino

TOOLS
Git · GitHub · PHPUnit · Ollama (local LLM) · VS Code · NetBeans

Education

Associate Degree (TSU) in Software Engineering

Universidad Tecnológica de Jalisco

2023 – Present

Cross-platform applications, databases, software architecture and IT project management.

Featured Projects

Aura · Android TV Box Launcher

Native Android · Java · Open source · 2026

↗ github.com/jorgejbz/Aura-TVBox-Launcher

- Built a **native Android launcher** in the style of Apple TV, in Java with no external libraries: ~57 KB APK, Android 5.0+ on any CPU architecture, fully navigable with a remote (D-pad) at 720p, 1080p and 4K.
- Implemented persistent favorites, an **accessibility service** to remap remote buttons, and a system card that shows the device's **real** RAM, storage and Android version.
- Created an **HDMI-CEC bridge** in Java (`app_process`) so the TV remote works when the firmware blocks its keys; measured latency of **2–4 ms**.
- Automated TV box diagnosis, backup and cleanup with **PowerShell + ADB**: found a fake ADB, firmware spoofing its version and RAM, a **root backdoor**, a residential proxy and hidden installers, and cleaned two real devices.

GTS Launcher · Android car head-unit launcher

Native Android · Java · Open source · v1.2 · 2026

↗ github.com/jorgejbz/GTS-Launcher

- Lightweight launcher (~100 KB, Android 8.0+) for Android car stereos, with large buttons designed for driving: CarPlay, Android Auto, radio and Bluetooth; the connected shortcut expands automatically.
- Vehicle panel with speed (car CANBUS, GPS as fallback), clock and media controls through the notification listener; configurable themes with live preview.
- Integration with manufacturer services (Topway TS10/TS18): battery voltage and light status read from the MCU, CANBUS data and active audio source.
- **In-app updates** via GitHub Releases (3 versions published); no root, no tracking and no unnecessary permissions.

Nutrilife · Digital nutrition clinic

Laravel + MySQL + Android · Team of 5 · UTJ 2026

↗ github.com/jorgejbz/nutrilife

- Platform with a **web app** for nutritionists (Laravel 13, Blade, AdminLTE, Alpine.js) and a **native Android app** for patients, sharing one cloud MySQL database.
- Clinical records, appointment scheduling, weight/BMI/measurement tracking and **exchange-based meal plans** (INCAP table, SMAE logic).
- **Nutrition engine** using Mifflin-St Jeor and Harris-Benedict equations, with alerts for allergies and medical conditions.
- Role-based access, Git/GitHub version control and **automated tests with PHPUnit**; subscription SaaS business model with 3 plans.

Strengths

- ✓ Troubleshooting and problem solving
- ✓ Clear documentation (guides, reports)
- ✓ Testing before delivery
- ✓ Teamwork and fast learning

Languages

Spanish	Native
English	Technical / B1

OptiRuta · Field-sales system for optical stores

Laravel 12 · PHP · REST API · 2026

↗ github.com/jorgejbz/optiRutaSistemaWeb

- Web system for an optical business that sells door to door: customers, frames, orders, payments and down payments, inventory with movement history, suppliers, role-based staff and sales routes.
- **REST API with Laravel Sanctum** for the sales reps' Android app: syncs customers and orders captured in the field, with validation, transactions and **UUIDs to avoid duplicate** orders when the app retries.
- Each order generates a **QR code** showing its status, the assigned collector and a link to the customer's location on Google Maps.

RUSH Sports Bar · Client website

Laravel 11 · Bootstrap 5 · Real client · 2026

- Website redesign for a sports bar in Zapopan: gathered requirements with the client and prepared the proposal; 6 sections (events, menu, F1 club, location with map, etc.), responsive design and WhatsApp on every page.
- **Automatic F1 calendar** from the api-sports.io API, with a 6-hour cache, a scheduled task and a fallback calendar if the API fails.
- **Admin panel** (AdminLTE) with protected access to edit the menu (name, price and photo) without touching code; the "Book a table" button opens WhatsApp with the event and date pre-filled.

Bomb Rush · Multiplayer game

Roblox · Luau · 2026

- Bomb dodgeball game: modes and matchmaking, rounds, coins, pets, shop and upgrades, with **progress saved in DataStore** and a mobile-friendly UI.
- **Server-authoritative logic**: every client event (throws, catches, purchases) is validated to prevent cheating.
- Own multi-client test plan: remote-event fuzzing (all rejected), 2 concurrent arenas, disconnects, cross-session persistence, **0 errors with 4 clients** and no memory leaks.

JARVIS · Local voice assistant

Python · Ollama · LLM · 2026

- Spanish-language voice assistant for Windows that runs **offline**: speech recognition, a local LLM (Gemma via Ollama) and text-to-speech, with 34 validated tools (memory, web search, files).
- Designed my own evaluation: accuracy went from **17/32 to 30–32/32** after redesigning the interpreter and verifier; 77 unit tests.

Professional Experience

Junior Web Developer

JB TECHNIPACK · Dec 2024 – Apr 2025

- Redesigned and optimized the corporate website: responsive mobile design and faster loading.
- Added new product information and updated content.
- Collaborated with internal teams to strengthen the digital presence.

Other Projects

- **Inventory management system** (Laravel + MySQL): product CRUD, user authentication and relational database design.
- **IoT automated hopper** (Arduino): ultrasonic and infrared sensors, real-time data on an LCD screen.
